NEUROSCIENCE

JOINT DOCTORAL TRAINING PROGRAM

National Institutes of Health

Karolinska Institutet

Application Deadline
December 1, 2015

This expanding program trains outstanding students from the USA and Europe to the award of the PhD degree in Neuroscience from the Karolinska Institutet in Stockholm, Sweden. The program combines the major resources and research excellence of both the Karolinska Institutet and the National Institutes of Health (NIH, Bethesda, Maryland) under joint mentorship. The training curriculum includes courses and tutorials taught at both institutions. Each student pursues collaborative research at both the Karolinska Institutet and the NIH, and therefore additionally benefits from two mentors, two laboratories, and two cultures. The program began in 2002 and has graduated at least 30 PhDs since its establishment.

Course Language

All aspects of the course are conducted in English, including the student's PhD thesis. No understanding of Swedish is required to live in Stockholm, since English is widely spoken by Swedes.

Stipend

Each new student will receive a stipend for up to five years starting at about $28,900 per year, plus funds for travel between the two institutes. Neither institute charges tuition.

Student Recruitment

Students will be recruited from the USA at the NIH and awarded scholarships to begin in August 2016.

Eligibility

Applicants to the program via the NIH must be US citizens or permanent US residents with an accredited Bachelor's degree, and undergraduate preparation in biology, chemistry (inorganic and organic), physics, and mathematics. They must have outstanding academic records and show exceptional promise for a career in biomedical research. Previous laboratory research experience is a desirable further qualification for entry into this program.

Application: Apply online by December 1, 2015
